

Energies and Chakras Replenishment in Prevention and Treatment of Patients with Atypical Pap Cells Exam

Huang Wei Ling

ABSTRACT: Introduction: The risk of cervical cancer associated with abnormalities found in cervical squamous cells is widely acknowledged. The prevalence of cervical cancer is 1.4% for women with atypical glandular cells. In traditional Chinese medicine (TCM) though, a tumor is a partial consequence of a systemic disease, which would make the atypical cellular results an indication of a much bigger picture, in this case, energy disharmonies. In TCM, atypical cells can grow in the human body when there is energy deficiency and Heat retention. The aim of this study is to demonstrate that the corrections of energy imbalances of Yin, Yang, Qi and Blood, taking out Heat retention and replenishing the chakras energy meridians is an important tool to treat patients with atypical cells in a pap smear exam. Methods: Two clinical cases of female patients (38 and 42 year olds) with a clinical history of atypical cellular results in a Pap smear exam. Both patients were frightened at the possibility of cervical cancer and sought

for TCM based treatment. Radiesthesia procedure was done in both patients to measure the energy of the chakras and both patients were completely depleted of energy. Chinese dietary therapy and auricular acupuncture with apex ear bloodletting were done to balance the Yin, Yang, Qi, Blood energies and clear the internal Heat. It was also prescribed homeopathy and crystal based medications to replenish the chakras energy. Results: Both patients normalized their previously atypical cellular results within a few days of the TCM treatment. The conclusion of this study is that the atypical cellular results in a Pap smear exam can be normalized with a correction of the woman's body energy disturbances, using Chinese dietary counseling, auricular acupuncture, apex-ear bloodletting and replenishing the chakras energy with highly diluted medications such as homeopathic medications in patients with atypical cells in a pap smear exam.

Biography

Huang Wei Ling, born in Taiwan, raised and graduated in medicine in Brazil, specialist in infectious and parasitic diseases, a General Practitioner and Parenteral and Enteral Medical Nutrition Therapist. Once in charge of the Hospital Infection Control Service of the City of Franca's General Hospital, she was responsible for the control of all prescribed antimicrobial medication and received an award for the best paper presented at the Brazilian Hospital Infection Control Congress in 1998
